SUMMER SCHOOL IN ASSET MANAGEMENT 2018

Summer School is a unique opportunity to learn, share experiences and meet new colleagues who share the same interests for Asset Management.

Bearing in mind the conditions of business on the domestic and European market, the asset management plays an important role in effectively reducing the costs of doing business and achieving cost-effective, concrete and competitive advantages.

For the sake of learning about the meaning and importance of the asset management, the Technical Systems Maintenance Society has organized the **Summer School in Asset Management 2018**.

Asset Management will be presented through a set of disciplines, methods, procedures and tools that allow the company to plan, create, acquire, maintain, exploit, sanitize, replace, increase and alienate infrastructural assets in the most cost-efficient and sustainable manner, at a lower total cost of the assets life cycle. All this, taking into account the level of services that demand and can be pay for by existing and future generations, both consumers and founder, and with an acceptable degree of risk for their own business, social community, security and the environment.

The idea of **SSAM** is to gather people to exchange experiences and discuss the present and future of asset management, with the goal of training in managing assets of the company in a reliable and sustainable way.

SSAM	04.06.2018.	05.06.2018.	06.06.2018.	07.06.2018.	08.06.2018.	09.06.2018.	10.06.2018.

PROGRAM

- Management and organization of the maintenance system
- Reliability and convenience of technical systems maintenance
- Maintenance methods and techniques
- ISO 55001
- KPI Maintenance

SSAM program combines the best local knowledge and experience in the field of maintenance, modernized in accordance with the recommendations of EFNMS.

SSAM includes testing the acquired knowledge, so that after successfully passing tests and exercises, the participants receive a certificate: „**ASSET MANAGER**”

WHO IS IT FOR?

SSAM aims at educating staff, management and top management in order to improve, raise work levels and efficiency to a better position in the business environment.

RESULTS

SSAM consists of lectures, individual and team work, workshops and presentations by which candidates are qualified to:

- create an Asset Management plan
- analyze and understand the current state of assets
- define the required level of services
- determine critical means for sustaining system performance
- define a strategy of exploitation, maintenance and capital investments that provide at least the "total cost of the assets life cycle"
- define a long-term financing strategy

INVESTMENT

350 EUR +VAT or 42.000 RSD +VAT (equivalent)

*NOTE: Participants of **SSAM** arrange accommodation themselves. Special accommodation conditions in the Slovenska plaža hotel is provided for the interested participants.*
